Changes to DB2358 for Brembo Calipers

This Brembo caliper has been fitted to many vehicles, and has had many disc pads with different wear sensor, groove and chamfer configurations to mitigate any noise.

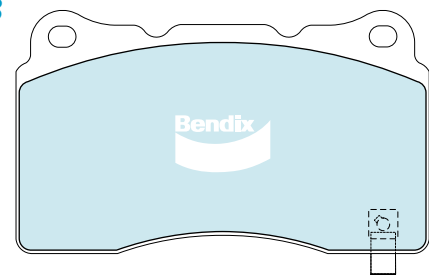

All friction causes vibrations, and most brake and suspension components have natural frequency they vibrate at. If the Pad or Caliper's natural vibration frequency matches the vibration frequency coming from the friction surface it becomes an audible noise.

The standard approach to stop noise was by adding a noise-dampening shim on the back. Recently another approach was created, weights were added to the pad to change its natural vibration frequency, so DB2358 was developed from the original DB1678.

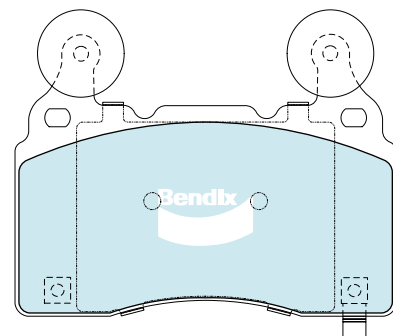

With the introduction of DB2358 it was found that the large round weights could come into contact with the inside of the wheel rim on some wheel designs. To rectify this the shape of the weights was modified so that they don't protrude from the caliper as much.

We are reintroducing the DB2358 with the modified weight design.

DB1678

Original DB2358

The reintroduced **DB2358** with modified weight design

DB2358

Available In:

Australia Ultimate, Street Road Track

Fits

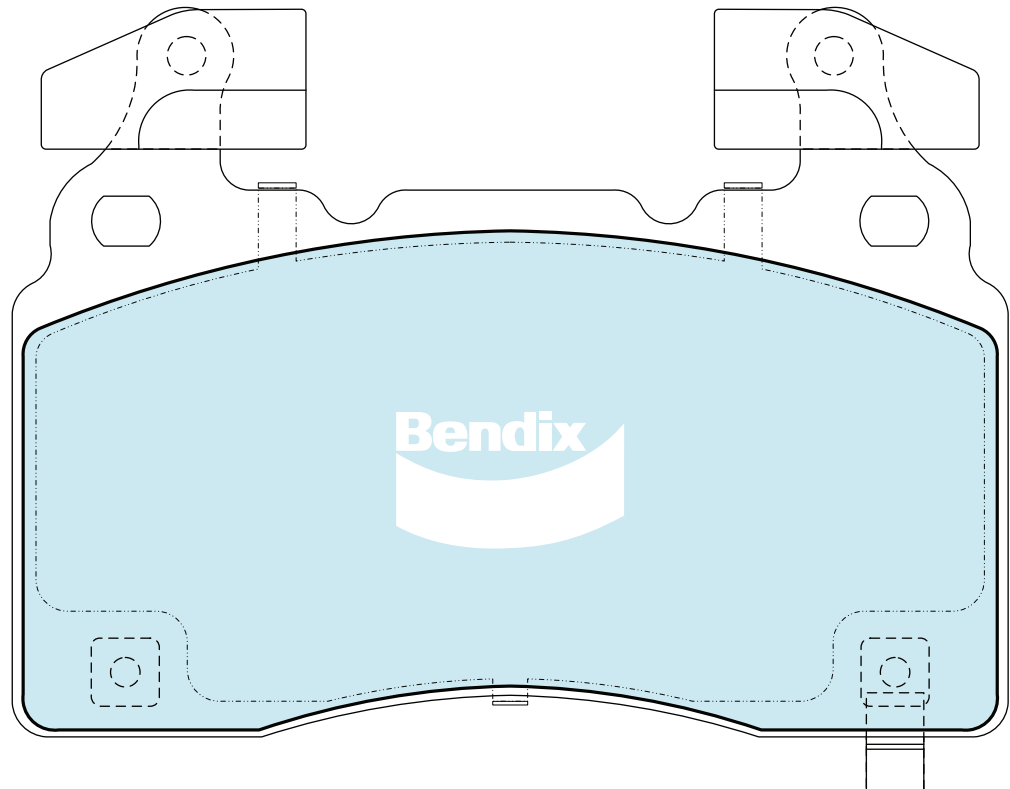

Cadillac
Holden

Set Contains

4 Pads

Dimensions

131.8 x 97.1 x 15 mm

Vehicle Application Data

Model	Year	Model Variant	Front	Rear	Park	Sensor Front	Sensor Rear
-------	------	---------------	-------	------	------	--------------	-------------

CADILLAC

Blue Number = New Part

CTS-V	2004 - 2007	5.7 V8, 6.0 V8 (4-Pot Silver Brembo Front Calipers)	DB2358 	DB1936 			
-------	-------------	---	---	--	--	--	--

HOLDEN

Commodore	2010.09 - 2013.04	VE Redline Series (Brembo Front Caliper)	DB2358 	DB1766 			
Commodore	2013.05 - 2017	VF Redline Series (Brembo Calipers)	DB2358 	DB2260 			
Commodore	2014 - 2017	VF Redline Craig Lowndes Edition	DB2358 	DB1936 			
Commodore	2018	ZB VXR 3.6 V6 Wagon [ZT35]	DB2358
